ENERGY MAN

IT'S GOOD

Any municipality can be an energy manager. It is good business and makes a lot of common sense. Mississauga has saved \$750,000 through proper energy management since 1977/78. One project in Ottawa, a cogeneration plant, is expected to save over half-a-million dollars per year when completed in 1985.

A new 14-minute film cites the experiences of eight Ontario cities as well as several towns and townships that undertook energy management projects. It is available for loan, at no charge to municipal organizations and groups. Also available with the film is an interior exhibit with several colourful display panels illustrating various methods of community energy opportunities. There is a nominal delivery charge for the display.

The film includes interviews with several Mayors and Reeves who explain how their communities undertook various energy saving projects which resulted in substantial dollar savings, and, most importantly, eased their municipal tax burdens.

MANAGEMENT

BUSINESS

The film also emphasizes the short payback periods possible for individual projects such as weatherstripping, proper caulking, oil conversions, energy conservation, retrofits and, of considerable importance, employee motivation programs.

The City of Nepean, for example, connected its major facilities including two large sports arenas and the new police headquarters to one monitoring computer. The computer switches heating controls on and off as needed during peak periods and controls ventilation, with savings amounting to thousands of dollars a year. Also, the Regional Municipality of Ottawa-Carleton currently has 15 energy management projects underway.
